Department of Orthopaedic Surgery Sports Medicine and Shoulder Service

Anterior Instability Repair Rehab Protocol Prescription

Patient Name: Date:

Diagnosis: Glenohumeral instability Frequency: 2-3 visits/week Duration: 4 months

Weeks 1-3: Phase I

Sling Immobilizer: At all times when not doing exercises

Exercises: Passive forward flexion (FF) in scapular plane to 90 degrees

Passive external rotation (ER) and extension to neutral

Elbow/wrist active range of motion

Scapular isometrics

Pain-free submaximal deltoid isometrics

Modalities as needed

Advancement Criteria: ER to neutral / FF to 90 minimal pain or inflammation

Weeks 3-6: Phase II

Sling Immobilizer: May discontinue after 4 weeks

<u>Exercises:</u> Active Assisted FF in scapular plane to 120: wand exercises, pulleys

Active Assisted ER to 30 degrees: wand exercises

Manual scapula side-lying exercises

Internal/external rotation isometrics in modified neutral (submaximal, pain-free)

Modalities as needed

Progress scapular strengthening - include closed chain exercises
Begin isotonic IR/ER strengthening in modified neutral (pain free)
Begin latissimus strengthening (progress as tolerated)
Begin humeral head stabilization exercises (if adequate strength and ROM)
Begin upper extremity flexibility exercises
Isokinetic training and testing
Modalities as needed
